

SEAMLESS COLLABORATION. DELIVERING A MODERN EXTRANET EXPERIENCE.

Where do you go to collaborate with partner users (clients, vendors, suppliers, partners, etc.)? If you are still using e-mail as a primary method of sharing information, you should consider an extranet. An extranet provides you with a closed virtual space for secure collaboration.

////// A BETTER WAY TO COLLABORATE

Many organizations lack the tools to effectively collaborate with external users. Extranets allow organizations to brainstorm and share information without having to rely on e-mail or phone communications. A modern extranet provides key stakeholders with a secure on-line collaboration space.

A SINGLE SOURCE OF TRUTH YOU CAN CO-AUTHOR
Internal & partner users can collaborate and make changes to a document at the same time.

CO-AUTHOR in REAL-TIME

READ - WRITE - EDIT

PERMISSIONS & GOVERNANCE

An extranet allows you to grant and restrict access to your site. The site owner can manage permissions.

- Allowing users to invite new partner users or
- Sharing by site owners only or
- Restricted domains sharing

Activities of the business partner users are tracked and audit reports can be viewed in Office 365 Activity Reports.

CALENDARS:
Key dates and milestones can be managed in a list. Team members can be notified when they have action items.

You can restrict partner users to a single site. They cannot search for or view any content outside of their site.

REAL TIME CO-AUTHORING:
Ensure documents are up to date by enabling this feature.

TASKS:
A task list in the collaboration site notifies team members when assigned tasks are due.

DOCUMENT LIBRARY:
Team or project documents are all in one place.

////// KEY FEATURES OF AN EXTRANET

Bringing internal and external contributors together is a key benefit of an extranet. Extranets allow stakeholders to share documents, co-author, share knowledge and transfer data. Without an extranet, contributors may resort to poor and unsecure practices in order to work together.

A GOOD EXTRANET CONNECTS STAKEHOLDERS AND CONTENT!

////// EXTRANETS IN OFFICE 365

Office 365 extranet sites eliminate the need for creating a costly on-premises extranet site. No additional hardware is required and using Office 365 greatly reduces the resource and labor costs. Your IT department can focus on more important tasks than creating and maintaining extranet infrastructure.

ALLOW PARTNERS TO CONNECT WITHOUT ACCESS TO YOUR ON-PREMISES ENVIRONMENT OR ANY OTHER SHAREPOINT ONLINE SITES.

////// SEAMLESS COLLABORATION

Collaborate with your partner users as if they are part of your organization, including allowing them instant messaging and the ability to make Skype conference calls.

LEVERAGE YOUR INVESTMENT

If you are not fully utilizing SharePoint and Office 365, you can start using SharePoint to create a extranet. If you have Office 365, you have SharePoint!

We have a team of experts who understand what it takes to successfully deploy an extranet site that delivers on the expectations of both internal and partner users. Let Kiefer help you leverage your Office 365 investment and drive collaboration like never before.
