

Now available in the Government Community Cloud

Microsoft Flow and PowerApps

What is Microsoft PowerApps?

PowerApps is a suite of apps, services, connectors and data platform that provides a rapid application development environment to build custom apps for your business needs. Using PowerApps, you can quickly build custom business apps that connect to your business data stored either in the underlying data platform (Common Data Service) or in various online and on-premises data sources (SharePoint, Excel, Office 365, Dynamics 365, SQL Server, and so on).

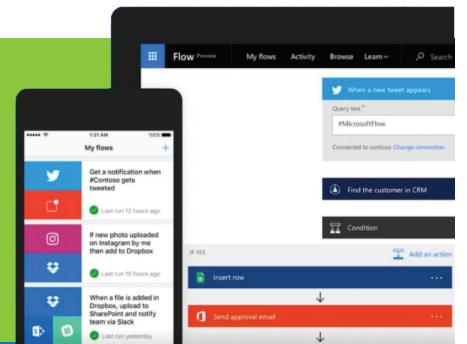

What is Microsoft Flow?

In a nutshell, organizations can use Microsoft Flow as an online workflow service to automate events (known as workflows) across the most common apps and services. Microsoft Flow also allows you to manage data either in the cloud or in on-premises sources like SharePoint and Microsoft SQL Server. You can use Microsoft Flow to automate workflows between your favorite applications and services, sync files, get notifications, collect data, and much more.

Improve efficiency by deploying apps to mobile devices and enabling workflow from anywhere!

Applications look great on all devices

Go mobile with workflow approvals

The Government Community Cloud (GCC)
