

Sample Project Site: Kiefer Project Management Solution for Construction

This site illustrates the key elements of a project management portal. Every client we have worked with has a customized site that leverages a fairly common set of features.

Customized Branding
Incorporate logos, brand standards and customized color schemes

User Friendly Navigation
UX/UI experts design an intuitive site experience

Project Information
Documents and images are easily accessible in the the project site. Nearly any document format can be stored in the project site

Reporting
Generate reports that aggregate project data

Dashboards
Meaningful visualizations with key project metrics and trends

Information "Roll-Up"
The portal can be used to deliver at-a-glance, real time status on a specific project

Narratives
Allow teams to provide additional details on projects and use in reports, dashboards, etc.

Solution Overview: Program and Project Control Solution for Construction Management

The Kiefer Program and Project Control Solution for Construction

Over the past 5 years, Kiefer Consulting has partnered with multiple clients to develop new and innovative solutions around their program and project management processes. With experience in document and records management, collaboration and corporate portals, business intelligence, custom workflows, and application development, we have the expertise in the areas that can have a significant impact on program and project management.

Regardless of the industry, clarity in expectations and desired results are quintessential for project teams to succeed. They need a mission and a vision to strive toward, priorities and objectives to help them progress towards the end goals, and methods to measure performance along the way.

The Kiefer Program and Project Control Solution for Construction Management allows organizations to manage projects and keep a close eye on Scope, Schedule, Budget, and Risks from a single project management portal.

A customized solution

Each program and project control solution Kiefer has built has been customized. When you work with the Kiefer team, you are working with consultants that have a deep understanding of the technology and experience working with clients in the construction management space.

Our team of designers and developers work closely with clients to build a site that meets brand standards and delivers an outstanding user experience.

There simply isn't a solution on the market that can deliver insights like this out-of-the-box.

A solution built to meet the needs of construction management

The Kiefer Program and Project Management Solution for Construction Management is a unique solution that has been designed to deliver critical project related information in an easy to navigate and intuitive platform.

Our solution addresses several critical areas of construction project management. Information Management, Collaboration, Project Control and Data Analytics.

Features of the Kiefer Program and Project Control Solution

Kiefer has experience in building portals that include the features and capabilities that are critical to program and project control. We have focused on the foundational requirements and feature set.

INFORMATION MANAGEMENT

Kiefer has built a solution that provides improved access to critical project information. Making information accessible and easy to locate is what sets the Kiefer solution apart.

Documents & Reports

Documents can be stored in the solutions repository. This includes cost control reports, contingency reports, cost estimates, and more.

Program Documents

Policies, standards, procedures, manuals, forms and any other documents that are used to ensure compliance and consistency can be stored in the project management portal.

Project Images

Photos can be tagged with date, captions, and locations.

COLLABORATION

The Kiefer solution is built for collaboration. The sites we've built to manage complex construction projects become a "hub" where stakeholders go to retrieve project information, communicate with colleagues and gather insights.

SharePoint Co-Authoring

Having documents managed in SharePoint ensures that there is a "single-source of truth" and enables users to co-author and share project documents.

Version Control

The Kiefer solution provides version control on all documents stored in the project repository to support data safety and control.

External Collaboration

Share information from the project site with external users and partners with control over permissions (view vs. edit).

Go Mobile

Kiefer has supported clients in building mobile applications that integrate with the construction management solution.

PROJECT CONTROL

The Kiefer solution can provide your organization with the tools and control measures that keep a project in scope, on-schedule and on-budget. Kiefer works with each client to customize data capture methods which enables organizations to identify & analyze trends to improve future performance and mitigate risks.

Change Request Process

Change requests can be submitted electronically, injected into an approval workflow and stored in the document library of the project site.

Compatibility with third-party applications

We've also built the Kiefer solution to work well with industry leading construction management solutions like Microsoft Project and Primavera P6.

DATA ANALYTICS

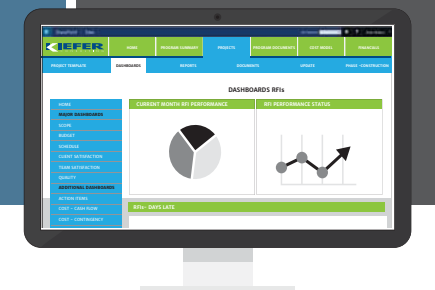

The Kiefer solution makes data readily available to all levels of a project team. Staff can consume and drill into data to facilitate decision making and identify areas for improvement.

Dashboards

Meaningful visualizations of key project metrics and trends. Dashboards provide an at-a-glance view of project performance.

Reporting

Custom reporting built to your requirements. View at project level or have us design program reporting capabilities.

Built on a proven technology platform

Kiefer has been working with SharePoint since 2003 and is a recognized leader in SharePoint development. Now, with the ability to extend the capabilities of SharePoint using PowerBI, Azure, and Office365, we can customize the solution to do more!

Fully integrated with Office 365

The Kiefer solution is fully integrated with Office 365, the leader in collaboration for the modern workplace.
